### Description of Options

#### Welding

The edges of banners are folded and heat welded approximately 1 inch on all sides. This is not added to the final dimensions unless it is double-sided. Welding makes banners sturdy and more resistant to fraying.

#### Sewing

For fabric banners, edges are crimped and sewed approximately 1 inch on all sides.

#### Grommets

Grommets are circular nickel plated holes distributed every 2 to 3 feet on the sides of banners. They provide support for suspending banners with rope.

#### Rope

Rope can be added into welded sides. We use 500 pound Nylon cord and leave 2 feet of slack on both ends.

#### Pole Pockets

Pole pockets range in size from 1" to 4". If the poles are 1" thick, 2" pole pockets are recommended. If the poles are 2" thick, 4" pole pockets should be used. Pole pockets will be printed only if they are solid colors. If double-sided, pole pockets will remain white. Multiple configurations available.

# Signs & Presentation Materials

Many size/qty configs

**Description of Options**

**Size/Qty Configs**

Customers are purchasing a full sheet, so they can decide how the signs are laid out on it. There are 62 size & quantity configurations, such as: 24" x 18" (10 per sheet)

**Custom Cut**

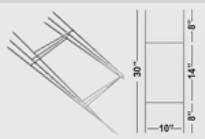

Set up signs of varying sizes to be printed and cut on the same full sheet.

**Contour Cut**

Signs are contour cut based on the cut file assigned (EPS or PDF), which contains a 1pt vector cutline and 0.25" identifying marks. The art file must also contain the 0.25" marks in exactly the same places.

**Metal-Stakes**

Wire sign holder for small to medium corrugated plastic signs. Suggested panel size: up to 24" x 18" .9 ga. zinc plated finish wire. Measurements can vary within 1/2"

**Gloss Laminate**

Adds gloss laminate finish to the sign
